IFS APPLICATIONS
EXTENDED PROFILE
OVERVIEW

IFS develops agile enterprise software for companies who manufacture and distribute goods, maintain assets and manage service-focused operations. Their ERP is used globally by manufacturers and other asset-intensive organizations, like offshore oil and gas drilling, aerospace and defense, and construction.

IFS’ ERP supports workflows for multiple manufacturing business models, and due to its emphasis on flexibility can be customized to companies’ specific needs. Multi-site, multi-currency and multi-company support make the system ideal for larger companies who work over multiple locations.

The system offers features which go beyond standard-level ERP functionality, offering a fully-embedded CRM alongside native functionality for Enterprise Project Management, Enterprise Asset Management, and Service Management. It can also be integrated with a variety of third party software for extended functionality.

The ERP is built on a service-oriented architecture and can be accessed as a web application. IFS offers a range of consulting services to clients - these include implementation project management, personalized software development, and technical consultancy.
