

VISIBILITY ERP EXTENDED PROFILE

OVERVIEW

Visibility Corporation is a leading provider of ERP software and services for complex manufacturing organizations. Founded in 1988, Visibility has built its business around understanding the operational demands of manufacturers that work in make-to-order, engineer-to-order, and other highly customized production environments.

Its flagship solution, Visibility ERP, is a modern, fully integrated enterprise resource planning platform designed specifically to help manufacturers improve control, efficiency, and profitability.

Visibility ERP supports a broad range of critical business functions, including engineering, project management, order processing, inventory management, warehouse management, manufacturing, CRM, and accounting.

The platform is built for companies that need deep functionality across both the shop floor and the front office, while also requiring the flexibility to match the way their business actually operates. Visibility is especially well-suited for manufacturers of complex products that need strong operational visibility and better coordination across departments.

A key differentiator for Visibility is its direct approach to customer success. The company develops, sells, implements, and supports Visibility ERP itself, without relying on third-party outsourcing.

This allows customers to work with a single team that understands the software, the implementation process, and the realities of manufacturing operations. Visibility also emphasizes flexibility and customization, helping ensure the ERP solution supports each customer's workflows and business goals rather than forcing rigid processes.

With more than 30 years of manufacturing experience and over 550 sites using Visibility ERP, Visibility Corporation continues to help manufacturers gain clearer insight into their operations and build stronger foundations for growth. Its focus on complex manufacturing, combined with a fully integrated platform and direct support model, makes Visibility a strong partner for organizations seeking an ERP solution tailored to demanding production environments.
