HANSAWORLD STANDARD ERP EXTENDED PROFILE

Standard ERP

OVERVIEW

Standard ERP is a software solution by HansaWorld aimed at organizations of all sizes.

The software is suitable for established, mature, and growing organizations looking for a comprehensive ERP system with an integrated CRM module. It is designed to extend software availability throughout an organization while reducing the reliance on interfaces between applications. It is modular, meaning it can be easily tailored to an organization’s requirements. Standard ERP also has a series of modules designed specifically for certain industries.

One of HansaWorld's Standard ERP's key features is the eBusiness module, which consists of a real-time web engine that allows users to quickly create websites and update content in minutes. There is also a powerful reporting and analytics tool, with customizable graphical analysis and dashboards to facilitate the exploration of turnover and profitability across the entire business.

The system can be installed on-premise or hosted in the cloud, and it can run on Unix, Linux, Apple OS, and Windows. It is accessible via a web browser on a range of mobile devices. Pricing is based on a per-user, per-month subscription model with additional charges for extra modules.
