

DNA

EXTENDED PROFILE

OVERVIEW

DNA is a suite of software applications aimed at the supply chain companies and in particular the aerospace and manufacturing industries.

The software is suitable for firms with complex bills of materials, or companies that require group jobs to be processed simultaneously such as precision machining businesses or fabrication companies. There are several versions of the software, each tailored to different types of manufacturers; aeroDNA for example, is designed specifically for aerospace subcontract manufacturing firms.

One of the software's key features is its ISO9001 and TS16959 compliance and traceability modules that aid organizations working towards stringent quality requirements. There are also advanced business reporting tools, shop floor data collection, scheduling and capacity planning and a fully featured Kanban management module.

Valuechain is deployed on-premise. It can be accessed on a via desktop or mobile device via a web browser.
