ERPFOCUS

FULCRUM CLOUD MANUFACTURING SOFTWARE

EXTENDED PROFILE

OVERVIEW

Fulcrum (often referred to as Fulcrum Pro) is a cloud-native manufacturing planning software that supports production operations across quoting, scheduling, inventory, and shop-floor execution.

It combines core capabilities traditionally found in ERP, MRP, and MES solutions into a single environment, connecting business planning with real-time operational data.

Fulcrum primarily serves small to mid-sized manufacturing businesses, including job shops and custom fabricators, that outgrow manual tools like spreadsheets but want to avoid the complexity of customized ERP systems.

CORE FUNCTIONS

- **Manufacturing planning and scheduling:** Fulcrum provides production planning and dynamic scheduling using live data to adjust job sequences based on priorities and resource availability.
- **Real-time inventory management:** Tracks material transactions (received, used, made, or shipped), giving transparent visibility across inventory lifecycles.
- **Quotation-to-order flow:** Users can generate quotes, convert them into sales orders, and manage the related bill of materials and routing data within the same platform.
- **Job tracking and costing:** Fulcrum captures labour and machine time directly from operations to support real-time job costing and performance monitoring.
