METACONSTRUCTX

EXTENDED PROFILE

Meta
ConstructX
By MetaOption

OVERVIEW

MetaConstructX is an all-in-one construction software solution built on [Microsoft Dynamics 365 Business Central](#). It consolidates project planning, cost control, field reporting, and document management into a single platform.

As a Microsoft Gold Partner, MetaOption LLC delivers construction-specific extensions that sit natively within Dynamics BC, reducing the need for separate point solutions and manual data transfers

CORE FEATURES

- **360° project management:** Plan, schedule, and track every phase of your build with flexible Gantt-style timelines and task lists. Adjust assignments on the fly and keep milestones in view.
- **Job costing & financial control:** Generate accurate estimates, automate purchase orders, and pull detailed financial reports so you spot overruns before they become costly.
- **Mobile field app:** Capture time, materials, and safety reports on-site with a clock-in/out app and geofencing, keeping your office team in sync with field crews.
- **Document & compliance management:** Store blueprints, contracts, and change orders in the cloud with version control. Receive regulatory alerts and run built-in risk assessments to stay audit-ready.
- **Integrated CRM:** Manage bids, leads, and client communications seamlessly through Dynamics BC's native interface.

DYNAMICS 365 BUSINESS CENTRAL INTEGRATION

Because MetaConstructX sits on Dynamics BC, you benefit from:

- **A seamless Microsoft ecosystem:** Connect out-of-the-box with Outlook, Power BI, and Teams for reporting and collaboration.
- **A familiar Interface:** Your staff sees the same menus and navigation they already use in Business Central.
- **A scalable platform:** Leverage Dynamics BC's security model, multi-company support, and cloud resilience without lifting data between siloed point solutions.

If you already run Dynamics 365 Business Central and need a single construction management platform covering everything from bids to billing, MetaConstructX combines familiar Microsoft tooling with construction-specific features.
